1. I choose median,because some rows have blank Sales_Amount and Few Sales_Amount values are extremely high compared to others so choosing median is more accurate here.

2. =MEDIAN(IF(D2:D100="South", C2:C100))

3. Instead of a normal average, use TRIMMEAN
   .
   =TRIMMEAN(IF(D2:D100="South", C2:C100), 0.2)

   Removes top 10% and bottom 10% of values (20% total) , Reduces impact of very high sales values ,Keeps all rows (no manual deletion) and 0.2 means 20% of extreme values are ignored
